COMPLAINT COMPASS · CLOSING

Closing speech (about 45 seconds)

Slow down here. Pause at each line break. Look at the judges, not the page.

> "To wrap up.
>
> Every day in India, thousands of people complain about the same few things: **a refund that never came, a late delivery, money taken for an order that never arrived.** Companies drown in these messages, and they find the real problem **days late.**
>
> Complaint Compass fixes that. It reads complaints from **email, calls, chat and social media**, in English, Hindi and Hinglish, counts **people, not messages**, and shows a company its **top ten problems**, with a score anyone can check.
>
> And it's built to be **fast and cheap.** On our live test, a complaint was sorted in about **half a second**, **ninety-six percent** never needed the expensive AI, it filed **ninety-eight percent** correctly, and it found **all five hidden problems** on its own. The whole run cost **six and a half cents.**
>
> It scales the same way: a company like **Swiggy's Instamart runs on two servers.**
>
> Our next step is simple: **a two-week pilot with one real company**, on real complaints.
>
> So a company stops reading thousands of complaints, and **starts fixing the few problems behind them.**
>
> Thank you."

If you only have 15 seconds

> "Complaint Compass turns thousands of complaints into the **ten problems that matter**, in **half a second** each, for a fraction of a cent. **Ninety-eight percent accurate** on our live test, and **two servers** for a company like Instamart. Next step: **a pilot with one real company.** Thank you."

Where each number comes from

- **Half a second:** 0.55 s median time to file a complaint (live run, 1,500 complaints).
- **96%:** 96.1% of complaints never reached the LLM (Claude Haiku 5.5).
- **98%:** 98.4% of 1,325 filed complaints went under the right issue, checked against an answer key.
- **All five hidden problems:** 5 of 5 issues hidden in the test data were found without being told.
- **Six and a half cents:** $0.065 for the whole run of 1,500 complaints.

- **Two servers for Instamart:** projected (25% of 7.8M daily orders, 2% complaint rate, one backup server).

The test data is synthetic; say “on our live test”, as the script does, not “in production”.
